

# STATEMENT OF PURPOSE

I am a person who likes to decorate and has a passion for learning about computer programs. When I was a child, I was curious about why this rectangular screen could show a picture and the movement of people. So, I decided to ask my parents, and they told me how it works and what it is called. Meanwhile, I became interested in technology and began using more technological gadgets. Moreover, when I was in primary school, Buranasuksa taught me about computer fundamentals and some basic programs such as Microsoft Word and PowerPoint. They also provided a Scratch program that got me more serious about programming. After that, I applied to secondary school, Bangpakok Wittayakom. They taught me about coding when I was in grade 8, and I really enjoyed it. My parents saw that I might be doing well with a computer system and should learn more about it. As a result, my father suggested to me that if I knew what I wanted to be and what I needed to do, I could take a GED system to graduate at the high school level and go to University before my contemporaries. Even though I had to learn and prepare for my GED test on my own, I still decided to get out of my secondary school and took a GED test.

Nowadays, computer skills are very essential in our daily life. I have attended online courses on various websites, such as BornToDev, THAIMOOK, IBM, SkillBuild, and Freecodecamp. These contribute to understanding more about coding and technology. Therefore, I can write programming code in different languages, such as HTML, CSS, Javascript, and Python. I also would like to learn more coding languages such as C, C++, R, etc. In addition, I also have experience in graphic design, photo decorating, and video editing. As a result, I have a dream to be a website developer and create a better application for society.

I am confident in studying in this faculty at KMUTT. The curriculum structure of this program is the best curriculum for computer science and it is suitable for my attention. Therefore, I am applying to King Mongkut's University of Technology, Cs@SIT faculty, and I hope to be a part of this department. I will do my best during college life as well as in the future. I will be appreciated if I have an opportunity to study at this university
